## Part I: Introduction

### **1 Information Systems in Global Context**

---

	Learning Objectives	1
1.1	History of Information Systems	1
1.2	Importance of Information Systems	2
1.3	Basics of Information Systems	3
1.4	The Changing Nature of Information Systems	5
1.5	Globalization of Businesses and the Need for Distributed Information Systems	9
1.6	Global Information Systems: Role of Internet and Web Services	10
1.7	<a href="#">Information Systems Security and Threats: A Glimpse</a>	12
	Summary	13
	Review Questions	13
	Further Reading	14

### **2 Threats to Information Systems**

---

	Learning Objectives	15
2.1	Introduction	15
2.2	New Technologies Open Door to the Threats	15
2.3	<a href="#">Information-Level Threats versus Network-Level Threats</a>	16
2.4	Information Systems Security: Threats and Attacks	17
2.5	Computer Viruses: The <i>bête noire</i> of Computing Era	19
2.6	Classifications of Threats and Assessing Damages	19
2.7	Protecting Information Systems Security	22
	<a href="#">Summary</a>	24
	Review Questions	25
	Further Reading	25

4.2	Security Policy, Standards, Guidelines and Procedures	57
	<i>Security Policy and Policy Types</i>	57
	<i>Types of Policies</i>	58
	<i>Standards, Guidelines and Procedures</i>	61
4.3	Information Security Scenario in the Financial Sector	63
<a href="#">4.4</a>	<a href="#">Information Security Management System (ISMS)</a>	<a href="#">64</a>
4.5	Organizational Responsibility for Information Security Management	65
4.6	Information Security Awareness Scenario in Indian Organizations	67
	<a href="#">Summary</a>	<a href="#">68</a>
	<a href="#">Review Questions</a>	<a href="#">68</a>
	Further Reading	69
<b>5</b>	<b>Building Blocks of Information Security</b>	
	Learning Objectives	70
5.1	Introduction	70
5.2	Basic Principles of Information Systems Security	70
<a href="#">5.3</a>	<a href="#">Security-Related Basic Terms and Definitions</a>	<a href="#">72</a>
5.4	The Three Pillars of Information Security	73
	<i>Confidentiality</i>	73
	<i>Integrity</i>	74
	<i>Availability</i>	75
5.5	Other Important Terms in Information Security	75
<a href="#">5.6</a>	<a href="#">Information Classification</a>	<a href="#">76</a>
5.7	Terms for Information Classification	77
5.8	Criteria for Classification of Data and Information	78
<a href="#">5.9</a>	<a href="#">Information Classification: Various Roles</a>	<a href="#">80</a>
5.10	Data Obfuscation	81
5.11	Business Systems' Classification	83
5.12	Event Classification	83
	<a href="#">Summary</a>	<a href="#">84</a>
	<a href="#">Review Questions</a>	<a href="#">84</a>
	Further Reading	85
<b>6</b>	<b>Information Security Risk Analysis</b>	
	Learning Objectives	86
6.1	Introduction	86
6.2	Terms and Definitions for Risk Analysis of Information Security	87

---

12.3	Network Architecture	187
12.4	Network Topologies	188
	<i>Physical Topology versus Logical Topology</i>	188
	<a href="#">Mesh Topology</a>	190
	<a href="#">Star Topology</a>	190
	<i>Bus Topology</i>	191
	<i>Ring Topology</i>	192
	<a href="#">Tree Topology</a>	194
12.5	The OSI Seven-Layer Model	195
12.6	Network Components	198
	<i>Network Cables</i>	199
	<i>Network Adapter Cards</i>	200
	<i>Hub and Switching Hub or the Switch</i>	200
	<i>Routers</i>	201
	<i>Gateways and Bridges</i>	203
	<i>Firewalls</i>	204
12.7	Network Protocols	205
	<a href="#">Link Protocol</a>	206
	<a href="#">OSI Protocols</a>	206
	<i>Routing Protocols</i>	209
	<a href="#">Tunneling Protocols</a>	210
12.8	Working of Networks and the Internet	211
12.9	Telecommunication Links and Other Important Related Topics	212
	<i>Circuit Switching and Packet Switching</i>	212
	<i>Host</i>	213
	<i>Dedicated Server</i>	213
	<i>Workstation</i>	213
	<i>Channel and Node</i>	213
	<a href="#">Contention</a>	214
	<a href="#">CSMA/CD</a>	214
	<a href="#">Twisted-Pair Cable</a>	214
	<a href="#">Coaxial Cable</a>	214
	<i>Fiber Optics</i>	215
	<i>Token, Token Passing and Token-Ring Network</i>	216
	<i>IEEE 802.5 Token Ring</i>	217
	<i>CAM and Polling Mechanisms</i>	219
	Summary	219
	Review Questions	220
	Further Reading	220

18.2	Meaning and Evolution of EAI	314
	<i>IT Systems in Pre-EAI Era</i>	315
	<i>IT Systems and IS Applications in Modern Era</i>	315
18.3	Application Security: Basic Issues	319
	<i>DBMS and Security</i>	320
	<i>Security Essentials for (Business) Applications</i>	320
18.4	Understanding Web Services in the Context of EAI	323
18.5	Business Drivers for Enterprise Application Integration	323
18.6	Application Communication Through EAI	326
18.7	Role of Web Services in Enterprise Application Integration	326
18.8	Security Complexities and Complications Due To Enterprise Application Integration	328
	<i>Application Integration – Understanding Security Complexities: Example 1</i>	329
	<i>Application Integration – Understanding Security Complexities: Example 2</i>	331
18.9	Security Threats and Risks for the Extended Enterprise	333
18.10	Mitigating Security Issues in Enterprise Application Development	339
	Summary	340
	Review Questions	341
	Further Reading	341

## **19 Security of Electronic Mail Systems**

	Learning Objectives	344
19.1	Introduction	344
19.2	Today's Electronic Mail Usage Scenario	344
19.3	Electronic Mail System Mechanism	345
19.4	The Growing Power of Electronic Mail Systems	346
	<i>E-mail is the New Messaging Media</i>	346
	<i>Mail-Enabled Applications</i>	346
19.5	Security Threats Posed by Electronic Mails	347
19.6	Countermeasures to Protect from Threats Posed Through E-Mails	349
19.7	Governance for Electronic Mail Systems	353
	<i>Standards for Secure Electronic Mail</i>	353
	<i>Conditions/Rules for E-mail Access</i>	353
	<i>Retaining Records from an E-mail System</i>	354
	<i>Internet Security</i>	355
	Summary	357
	Review Questions	357
	Further Reading	358

24.9	Common Misconceptions About Capability Maturity Models	445
	Summary	446
	Review Questions	447
	Further Reading	447
<b>25</b>	<b>COBIT, COSO-ERM and SAS 70</b>	
	Learning Objectives	449
25.1	Introduction	449
25.2	Control Objectives for Information and related Technologies – the COBIT	449
	<i>Structure and Objectives of COBIT</i>	451
	<i>COBIT and IT Governance</i>	454
25.3	COSO Enterprise Risk Management Model (COSO-ERM)	457
	<i>COSO Description</i>	457
25.4	ERM: Definition and History	458
	<i>Why ERM is Important?</i>	459
	<i>ERM Benefits</i>	461
25.5	Statement on Accounting Standards (SAS 70)	462
	<i>SAS 70 Link to SOX and COSO</i>	464
	<i>The SAS Family Implications for Auditor Community</i>	464
	<i>SAS 70: Type I and Type II</i>	465
	<i>SAS 55 and SAS 94</i>	465
	Summary	465
	Review Questions	466
	Further Reading	466
<b>26</b>	<b>Information Security: Other Models and Methodologies</b>	
	Learning Objectives	469
26.1	Introduction	469
26.2	Other Frameworks for Information Security	470
	<i>ITIL and ISO 20000 (formerly BS 15000)</i>	470
	<i>Information Security Management Maturity Model (ISM3)</i>	474
	<i>InfoSec Assurance Capability Maturity Model (the IA-CMM)</i>	478
	<i>The NIST Framework</i>	480
	<i>The Common Criteria</i>	484
	<i>BASEL II</i>	487
26.3	Other Methodologies and Standards for Information Security	489
	<i>InfoSec Assessment and Evaluation Methodology (IAM and IEM)</i>	489
	<i>ISACA Standards for IS Auditing</i>	490

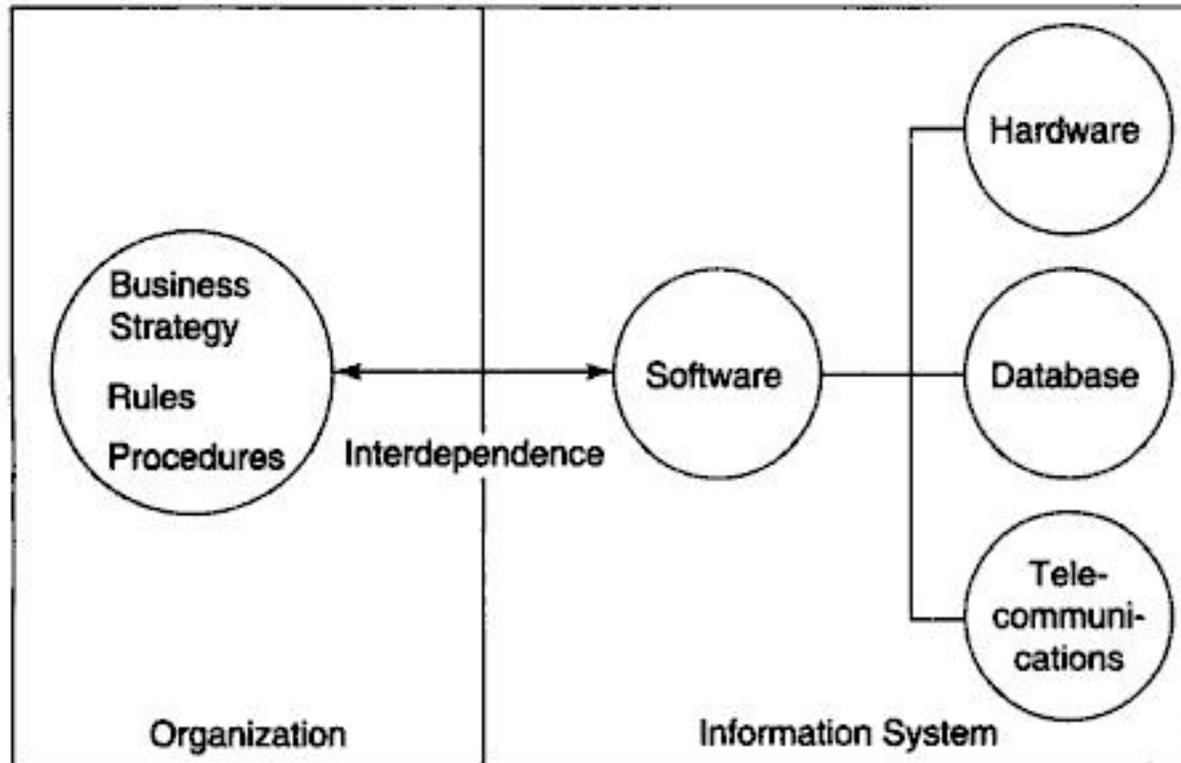

30.6	Handling Data Privacy Challenges – Using Data Masking to Create Test Data	613
30.7	Best Practices – Data Privacy Team for Test Data Management	617
	<i>Who Should be Responsible for Data Masking?</i>	617
	<i>Best Practice 1 – Data Privacy Team During Testing</i>	618
	<i>Best Practice 2 – Data Privacy Plan with Data Privacy Requirements Defined and Documented</i>	619
	<i>Best Practice 3 – Performing Privacy Analysis</i>	619
	<i>Best Practice 4 – Identifying Organization’s Business Processes</i>	619
	<i>Best Practice 5 – Use of Data Dictionary for Alias Name and Data-Masking Impact Analysis</i>	620
	Summary	621
	Review Questions	622
	Further Reading	622
<b>31</b>	<b>Privacy – Technological Impacts</b>	
	Learning Objectives	625

# Part I

## Introduction

- ❖ **Chapter 1** Information Systems in Global Context
- ❖ **Chapter 2** Threats to Information Systems
- ❖ **Chapter 3** Security Considerations in Mobile and Wireless Computing
- ❖ **Chapter 4** Information Security Management in Organizations
- ❖ **Chapter 5** Building Blocks of Information Security
- ❖ **Chapter 6** Information Security Risk Analysis

**Figure 1.3** | Functions of an information system.

there are HR information systems and in marketing and sales area, there are CRM systems. It is important to note at this point that not all types of information can be computerized, especially the ones with an external source. Table 1.1 shows business area-wise organization of information.

**Table 1.1** | Business area-wise information

Business area	Coverage	Typical examples	Remarks
Business environment	Business conditions external to the organization that can impact its business activities	<ol style="list-style-type: none"> <li>1. Rules and compliance set by regulatory agencies</li> <li>2. Issues created by competitors</li> <li>3. Licensing authorities' requirements</li> </ol>	These may not be handled in a computerized manner inside a company data warehouse
Customers and other affinity organizations	People and organizations who acquire and/or use the company's products	<ol style="list-style-type: none"> <li>1. Prospects</li> <li>2. Customers</li> </ol>	Organizations use these mechanisms for capturing potential customers (prospects) and for distinguishing between parties who buy the product and those who use it
Communications	Messages and the media used to transmit them	<ol style="list-style-type: none"> <li>1. Advertisement campaigns</li> <li>2. Target audience</li> <li>3. Company websites</li> </ol>	These often pertain to marketing/prospecting activities. They can also apply to internal and other communications
External organizations	Organizations, except customers and suppliers, external to the company	<ol style="list-style-type: none"> <li>1. Complementors /business partners</li> <li>2. Existing competitors</li> <li>3. Potential competitors</li> </ol>	In the paradigm of 'networked organizations' of today, this inclusion is important

customer service, while substantially reducing the amount of time and training required for common service operations. Client/server computing may also provide the best alternative for meeting new requirements for electronically interfacing with business partners; a service that is very crucial in electronic business (e-business) era.

An important point to note is that contrary to many predictions and common belief, client/server computing is not 100% replacing traditional mainframe-based application systems. Instead, a blended system seems to be emerging that combines the data-processing horsepower of the legacy mainframe applications with the opportunities for rapid application development and electronic interfacing capabilities of the client/server technology. The cornerstone of this solution is a three-tiered approach, in which an application layer provides an interface between the client/server system and the legacy mainframe system.

**Box 1.2** **Three-Tier Architectures for Information Systems**

The three-tier architecture (also referred as the multi-tier architecture) was developed to overcome the limitations of the two-tier architecture. In the three-tier architecture, a middle tier was added between the user system interface client environment and the database management server environment. There are a variety of ways of implementing this middle tier, such as transaction processing (TP) monitors, message servers or application servers. The middle tier can perform queuing, application execution and database staging. For example, if the middle tier provides queuing, the client can deliver its request to the middle layer and disengage because the middle tier will access the data and return the answer to the client. In addition, the middle layer adds scheduling and prioritization for work in progress. The three-tier client/server architecture is known to improve the performance of groups with a large number of users (in thousands) and improves flexibility when compared to the two-tier approach. Flexibility in partitioning can be as simple as 'dragging and dropping' application code modules onto different computers in some three-tier architectures. A limitation with three-tier architectures is that their development environment is reportedly more difficult to use than the visually oriented development of the two-tier applications. Recently, mainframes have found a new use as servers in three-tier architectures.

The most basic type of three-tier architecture has a middle layer consisting TP monitor technology. The TP monitor technology is a type of message queuing, transaction scheduling and prioritization service where the client connects to the TP monitor (middle tier) instead of the database server. The transaction is accepted by the monitor, which queues it and then takes the responsibility for managing it to completion, thus freeing up the client. When the capability is provided by third-party middleware vendors, it is referred as 'TP Heavy' because it can service thousands of users. When it is embedded in the DBMS (and could be considered a two-tier architecture), it is referred as 'TP Lite' because experience has shown performance degradation when over 100 clients are connected. The TP monitor technology also provides:

1. the ability to update multiple DBMSs in a single transaction;
2. connectivity to a variety of data sources including flat files, non-relational DBMS and the mainframe;
3. the ability to attach priorities to transactions;
4. robust security.

Using the three-tier client/server architecture with TP monitor technology results in an environment that is considerably more scalable than a two-tier architecture with direct client to server connection. For systems with thousands of users, the TP monitor technology (not embedded in the DBMS) has been

**Box 1.3** *Continued...*

3. *universal description, discovery and integration (UDDI) and the web services inspection language (WSIL), used to find web services;*
4. *WS-security, used to manage security across web services;*
5. *WS-coordination, used to coordinate multiple web services into a larger composite system.*

Many other web service standards remain under development. Organizations that publish these standards include the *World Wide Web Consortium (W3C)* and the *Organization for the Advancement of Structured Information Standards (OASIS)*.

Benefits of web services for developing IS of global nature are as follows:

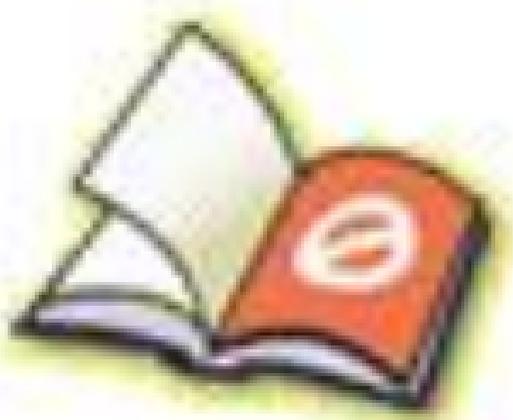

1. Web services tools are available for most computer systems, including mainframes and packaged applications. This means that not only the existing applications can be retained, but also the existing knowledge of staff can be applied and extended using web services for business integration.
2. Web services are adaptable and can handle changes more readily than other integration solutions, because they use structured text as their message format. Therefore, because the cost of maintenance is reduced, the overall cost of a web services system also reduces.
3. IT managers now have the ability to exchange data between most applications, on most computers, in a consistent and standard way. Tools and further standards are therefore emerging to build composite applications that can model and manage business processes around these business-level components.
4. If necessary, an alternative application can be used to provide web services without changing the overall effect of the system. This gives significant flexibility in the choice of a supplier. This aspect is particularly important in the consideration of outsourcing security services.

## 1.7 Information Systems Security and Threats: A Glimpse

So far, we have seen that the use of IS has become mandatory for businesses to perform their day-to-day functions efficiently. In this section, we set the context for understanding the issues related to IS misuse, resulting threats and countermeasures. This section is only an overview about threats to IS. It sets the stage for the detailed discussion taken up in the next chapter on the role of organization in security management.

Given the crucial role played by information systems, it is important that they remain secured and that the data contained in them do not fall into the hands of those who are not intended to have access to it. Security of IS becomes particularly important with the advent of the Internet. The access by Internet in particular allows a mass of information to remain up-to-date in real time, but it also opens the door for external encroachment. Thus, it is essential to ensure the physical protection of the information that, when stored without precautions on the hard disk of a computer connected to the Internet, can be read, copied, modified or destroyed from a working station located somewhere on the planet without the owner realizing the tampering.

In the modern business era, the use of desktop PCs, laptops, and network connectivity including the Internet and electronic mail (e-mail) is as essential as the telephone at workplace. The employees and networked IS are the most valuable assets for any organization. The misuse of information systems by employees, however, poses serious challenges to organizations including loss of productivity, loss of revenue, legal liabilities and other workplace issues. Organizations need effective countermeasures to enforce their appropriate usage policies and minimize their losses as well as increase the productivity of knowledge workers. The basics of *information systems security* are related to:
